BUSINESS Service Packages

powered by ALARM.COM®

With a Commercial service package, your business has access to purpose-built features that help with greater remote awareness and efficiency. These features include an intuitive web and mobile app interface, robust business reporting, and more.

Key benefits of our Commercial service packages:

SMART AUTO-ARMING SCHEDULES

With Auto-Arming, the system remembers to arm the business even when employees and delivery drivers forget. Create an arming schedule for daily pre-set times or program the system to re-arm itself after inactivity. For example, re-arm after 60 minutes of inactivity, but only between 8 p.m. and 6 a.m. Monday - Saturday.

BUSINESS NOTIFICATIONS & UNEXPECTED ACTIVITY ALERTS

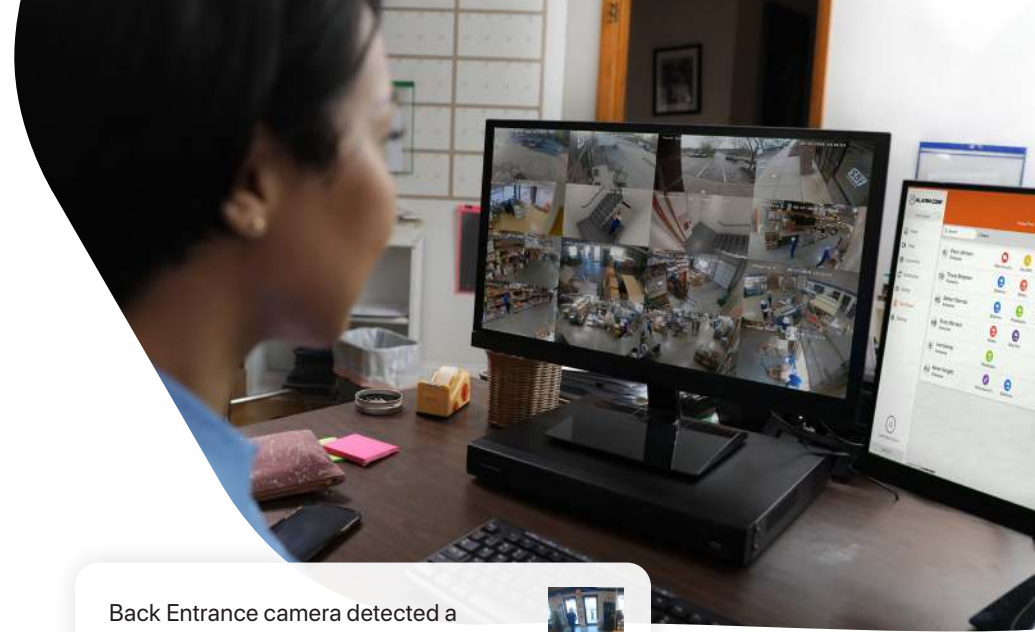

Receive notifications of important activities such as opening late, closing early, a failed access card attempt, or if a refrigerator door is left open after business hours. In addition, the system learns normal business activity and automatically generates alerts when unexpected activity is detected, such as when a door is accessed at an unusual time.

BUSINESS INSIGHT REPORTS

Get reports made just for businesses to gain insight on daily, weekly, and monthly open/close times, see who armed or disarmed the system, or who used card access at specific doors. View sensor activity of customer foot traffic to help determine staffing requirements during peak hours.

ONE YEAR OF EVENT HISTORY

All arming, disarming, alarm, sensor, and access control data is securely stored for one year and can be searched, filtered, and exported. Retrieve specific activity for a single site or across multiple locations.

Back Entrance camera detected a person and recorded a clip at 6:21 pm.

MULTI-LOCATION MANAGEMENT

Easily manage multiple locations through a single dashboard. Add or revoke security panel user codes and card access users, check in on live video, set thermostat schedules, and view system status across multiple sites at once.

FULLY INTEGRATED ACCESS CONTROL & VIDEO SURVEILLANCE WITH BUSINESS ACTIVITY ANALYTICS

Control the entire system using a single, intuitive user interface. Save time and improve security with features like Unexpected Activity Alerts, double swipe an access control card to arm or disarm, and set video recording to be prompted by system events.

When using a commercial grade recorder, you can jump from any system event directly to the related video recording. Our Business Activity Analytics provide critical information on your business such as occupancy tracking, people counting, heat mapping, queue monitoring, and crowd gathering. You can also receive a Video Health Report that includes monthly and on-demand checkups for the video camera system's performance.
